WORK EXPERIENCE

Electrovese Solutions

May 2022 – Jun 2026

Senior UI/UX Designer | Remote - Mohali

Worked across **15+ products** on apps, SaaS platforms, CMS, HRMS, admin panels, and websites. Owned research, wireframing, prototyping, systems design, and delivery as the embedded designer across multiple cross-functional teams simultaneously.

Ind-Swift Skynet · Pharma domain · Enterprise SaaS

- Designed, wireframed, prototyped, and continuously evolved workflows across **20+ enterprise modules** including recruitment, leave management, claims, loans, performance, and employee operations, transforming lengthy manual processes into centralized digital experiences.
- Digitized recruitment workflows by introducing recruiter dashboards, job-posting systems, and status-tracking flows reducing hiring cycle time by **~40% (from ~18 days to ~11 days)**.
- Defined a **unified component system** to maintain consistency across role based permissions, dense data tables, and data heavy enterprise workflows.

EAPL CRM · Power & Energy Solutions · Enterprise SaaS

- Designed a scalable **enterprise CRM** for managing **dealers, distributors, visits, orders, pricing schemes, MOQ rules, points earned, travel reports, feedback forms, and product master** data across admin workflows.
- Structured **complex sales** and **channel operations** into clear product modules, including Partner Management, Commercial Rules, Field Operations, Orders & Performance, and master data management.
- Created **reusable design patterns** for data-heavy workflows such as listing **tables, advanced filters**, add/edit forms, detail pages, status badges, modals, pagination, and **rule configuration** screens.

Dr. Morepen Home Care · Doctor at home services · iOS & Android, Web

- Led the end-to-end UX process by researching, wireframing, prototyping, and designing the complete experience across patient booking, doctor dispatch, in-visit tracking, and post-visit health summaries for both patients and doctors.
- Piloted with **8 doctors** in the first round. Stayed close to how they actually used it (not how I assumed they would), caught what the wireframes had missed, iterated, and expanded to **12 doctors** after the revised flows held up.
- The challenge was **building trust** and **operational reliability** into a service where patients needed immediate reassurance, while doctors needed structure, verification, and clinical accountability. Same product. Very different expectations.

PSConnect · Consumer health · iOS & Android

- Led **end to end product design** for a personal health app combining medication tracking, self care routines, and health monitoring.
- Designed a **gamified medication tracking system** using streaks, positive reinforcement loops, and smart reminders.
- Introduced **streaks, rewards, and unlockable pet experiences** to improve long-term engagement and make medication adherence feel more interactive and motivating.

Ksheer Sagar · Field ops & manufacturing · iOS & Android

- Introduced a **geo verified punch in flow** with mandatory photo capture to confirm on site worker presence and **reduce proxy attendance**.
- Built a raw material intake and production tracking module. Every item logged on receipt, every batch tracked in progress, every output timestamped. Went from **zero visibility to a full audit trail**.
- Designed **QR enabled operational workflows** for tray-level tracking, batch management, packaging, and production monitoring to improve traceability across factory operations.

Bobble AI

Product Designer (Intern) | Remote - Gurgaon

Oct 2021 – Apr 2022

- ▶ Designed ad creatives and promotional UI assets for Samsung devices, maintaining visual consistency across a high volume campaign pipeline.
- ▶ Participated in user interviews and cultural research for a Tamil language keyboard application, translating insights into wireframes, interactive prototypes, and UI designs that reflected regional language behaviors, cultural nuances, and user needs.
- ▶ Collaborated cross functionally with product, marketing, and engineering on feature rollouts and visual QA.

DXC Technology

Associate Software Engineer | Remote - Bangalore

Apr 2021 – Sep 2021

- ▶ Contributed as a .NET Developer on a client application modernization project, focusing on code conversion and migration readiness.
- ▶ Worked with .NET and Visual Basic to support application development, maintenance, and code transformation tasks.
- ▶ Underwent AWS Cloud training to support the migration phase of the project and gain hands-on understanding of cloud migration concepts

SKILLS

Expertise

Product Design	Systems Thinking, Design Strategy, Information Architecture, End to End UX
Research	User Interviews, Usability Testing, Journey Mapping, Heuristic Evaluation
Execution	Wireframing, Prototyping, Design Systems, Accessibility & WCAG Guidelines ,Mobile-first & Responsive
Collaboration	Cross-functional Delivery, Stakeholder Communication, Ownership, Feedback-driven Iteration
AI-Assisted Design	Prompt driven ideation, Rapid UX iteration, AI assisted copywriting, Design validation

Tools

Design	Figma, Adobe XD, Miro, Draw.io, Illustrator, Photoshop
AI & Prototyping	Invision, ChatGPT, Claude, Figma Make, Bolt, Lovable, Stitch, for rapid prototyping, UX exploration, copy generation, and iterative workflows
Management	Notion, Asana, Slack, Jira
Front-End	HTML, CSS, working knowledge for prototyping & dev collaboration

EDUCATION

Chandigarh University

B.Tech, Computer Science & Engineering

Jul 2017 – May 2021
